Vinyl Gate Construction

Vinyl gates from Anchor Fence have been proven to be the most durable gates in the fence industry today! Here are a few reasons why

STRONG, DURABLE

EFFICIENT, SECURE

This anti-sag method is used for every style of vinyl gates from Anchor Fence.

Aluminum Gates

An aluminum gate adds security and a classic look to any property. Anchor Fence customizes aluminum gates to fit all openings. Gates can also be customized by style or need, circles and scrolls add detail to aluminum gates, while puppy picket ensures small dogs will not escape your yard.

Textured Vinyl Fence

**Galveston CertaGrain
in Sierra Blend Color**

CertaGrain® texture mimics the look and feel of wood fence without the maintenance with its line of vinyl privacy fences. Making use of a revolutionary texturing method, Chesterfield with CertaGrain® texture attributes an authentic wood-like physical appearance in an easy-to-keep vinyl design and style. Vinyl gives resistance from the decay, molding, warping or splinting that is frequent with wood fences. The resilient design has ColorLast™ fade safety for superior color retention.

This material is available in 4, 5 and 6 foot heights for residential or commercial properties. The new colors and textures join Anchor Fence's present colors of white, almond and khaki/clay, which are also offered in a smooth finish.

**Chesterfield CertaGrain
in Arctic Blend Color**

ANCHOR FENCE

"The difficult we do right away; the impossible takes a little longer."

Anchor Fence is a supporter of 100% American made products. We stock all materials and supplies in house and custom build/design all of our own products.

What effects does my vinyl fence have on our environment?

Vinyl (PVC) products are safe and non-toxic. They will not breakdown and release harmful chemicals into the ground and they do not require toxic chemicals such as (stains, waterproofing, paint, paint thinner) for regular upkeep like treated lumber can. No trees are used in the manufacturing of vinyl fences. If a vinyl fence ever needs to be taken down it can be recycled into other products, such as (hoses, watering cans or other recycled products). It's a fact that vinyl fence can save trees and be recyclable. Buying a vinyl fence is good for the environment and that makes us, Anchor Fence, a green company. Anchor Fence, working for a better future.

How is vinyl fence put together?

Anchor Fence has an extensive array of styles all designed and fabricated in house at our Redford, Michigan facility. While there are many styles, a common principle remains. Essentially, holes are routed into each post to accept the rail of that particular style of fence, in turn that rail will receive 1 or 2 notches depending on the rail size. The notch locks the rail inside the post, thus showing a strong and clean finish with the use of no screws. Now comes the most important part of building a vinyl fence, getting the post set correctly, a typical vinyl fence uses a 5"x 5" post and typical post hole diameter should be 9" x 42" deep. At Anchor Fence we route an extra circular hole at the bottom of the post. This is to insure concrete falls inside the post, so when the concrete cures the post and footing become one solid structure.

How are vinyl gates made at Anchor Fence?

Vinyl gates from Anchor Fence have been proven to be the most durable vinyl gates in the fence industry today! Anchor Fence goes to extreme measures when building a custom vinyl gate to ensure that there is not a single place around that can give you a better gate! We do not keep a stock of pre-made gates. When you select our company to supply a gate for your fence, you are guaranteed to receive the PERFECT gate that is specifically designed to fit your gate's opening. Stop by our office today and see some of our display models.
